Aphasia refers to difficulty in either speaking or understanding speech that may occur after a brain injury such as stroke.

We are investigating effectiveness of language training for individuals with aphasia.

The language training focuses on speaking in sentences.

It includes about 18 hours of individual therapy spread over 3-4 weeks, and additional language testing. Participants will be paid $20 for eligibility testing and $50 upon study completion.

Eligibility
- Diagnosis of aphasia following brain injury/stroke
- Can speak at least in single words and some phrases
- Speak English
