Computer Science will be effectively removed from the College of Engineering.

- Our peers are moving in the opposite direction.
  - MIT
  - Stanford
  - Berkeley
  - Illinois
  - Michigan
  - . . .

This has been an exclusive process.

- Key areas were not represented on the Task Force.
  - College of Engineering
  - Biological Sciences
  - Cognitive Studies
  - Statistics
  - Sociology
  - Operations Research
  - Psychology

The impact of exclusion can be extreme.

- Success in Information Science and Technology will be defined in terms of:
  - A small group of faculty in Computer Science
  - A new administrative structure.
- Areas that are critical to Information Science and Technology will be marginalized, for example:
  - Computer Architecture - Wireless Networks
  - Communication Theory - Advanced Electronics
  - Information Theory - Advanced Materials

Suggestions:

- Take a deep breath and slow down.
• Make this a more broad-based effort at all levels.

  - Include faculty from all over the University on equal terms.

  - Create a Steering Committee with Power

• Solicit the opinions of our outside peers.
