

## Who We Are

Founded in 1876 and chartered by the U.S. Congress, the American Chemical Society is one of the world's largest scientific organizations, with more than 200,000 individuals forming a global community across 140 countries. The mission of the ACS is to advance the broader chemistry enterprise and its practitioners for the benefit of the Earth and all its people. The ACS' vision is to improve all people's lives through the transforming power of chemistry.

Much of the activity of the ACS is conducted through local sections. The Cornell Local Section was chartered in 1903, and focuses on serving communities in Tompkins county and the surrounding environs.

During the COVID pandemic, the local section fell silent for a period, and in 2022 we relaunched activities with a new Executive Committee and new focus. We'd love to have you join us in our activities moving forward!
