### “Reinventing Construction – a Route to Higher Productivity”

Featuring

**T.G. Jayanth**

*Expert - Capital Projects & Infrastructure, McKinsey & Co.*

If there is one factor that has the potential to significantly improve the outcome of capital projects for owners and contractors, it’s higher construction productivity. However, a recently published report from McKinsey Global Institute (MGI), *Reinventing Construction - a Route to Higher Productivity*, finds that U.S. construction labor productivity is lower today than it was in 1968, while productivity in manufacturing, retail and agriculture has grown by as much as 1,500% since 1945. The presentation will discuss the key findings from this report, including the root causes of poor productivity, and the seven very specific levers that could transform this situation, and boost productivity by up to 50% for those organizations willing to make the necessary changes.
