Bi322 Cell Biology    Summer 2016

Instructor: Philip Washbourne    346-4138    pwash@uoregon.edu

Office hours: Mondays 1:30-2:30pm or by appointment, Huestis 334D

Lecture time and room       Discussion time and room
Monday to Thursday               Tuesday/Thursday
10 – 11:50pm                       9 – 10:50pm
111 HUE                                111 HUE

Course Prerequisites
Bi214 or Bi252 or equivalent are required. If you are uncertain about whether you have met the prerequisites, please email me. If you lack the prerequisites, I encourage you to read Chapters 3, 4, and 13 of Essential Cell Biology (4th edition) on reserve in the science library before class.

Course topics and goals
This course covers eukaryotic cell biology. You will learn the components of a eukaryotic cell and how they are inter-related; methods cell biologists use to study cells (including light microscopy, laser scanning confocal microscopy, electron microscopy, biochemistry, DNA microarrays, transgenics, and other cutting edge techniques); and a glimpse of the role of cells in development and cancer. We will not cover plant cells or prokaryotic cells.

The goals of this course are to give you (1) a basic knowledge about the fundamental concepts of cell biology; (2) a working cell biology vocabulary; (3) an understanding of the methods used by cell biologists; and (4) practice thinking analytically and synthesizing information, so that you will be better equipped to read and critically analyze primary scientific literature or media reports on cell biology topics (e.g. stem cell research).

Course textbook
Required readings are mostly from the new 4th edition of Essential Cell Biology (ECB). Multiple copies will be on reserve in the science library. Additional required reading beyond ECB4 will also be posted on Canvas for downloads.

Required reading is to help you understand the lectures, and help you do well on the quizzes. Quizzes will be limited to material covered in the reading; exams will be limited to the material covered in lecture.

Additional Materials from the textbook can be accessed online via the publishers website:
http://www.garlandscience.com/garlandscience_student/student_home.jsf?sessionid=LSo54uRAwqqDGizlTfQuJg__?landing=student

Course website
We will use Canvas as a course website. The site will contain class postings, changes in the reading, links to cell biology movies and other resources that you will need to do well on the exams, and copies of important class materials. Please contact me immediately if you do not have the resources or knowledge to access this website.
Lectures. Time and place listed above. I will post a PDF of the lecture slides prior to class so you can use the prints as note templates.

Discussion sections. All sections will start with a short quiz on the readings. Ideally these will be performed on a laptop during class through Canvas. Most discussion sections will emphasize methodology relevant to the class, including light and confocal microscopy, antibody production and uses, DNA sequencing, etc. Several “field trips” are planned, including to the genomics and EM facilities. Some discussion sections will be review sessions for the midterms.

Materials needed. This class will use iClickers to gauge understanding during lectures. iClicker scores will be used for the participation part of the grade. Over 75% participation rate using iClickers will give 100% for this part of the grade. Quizzes will be conducted in class on laptops. Please ensure laptops are available for the discussion sections. If quizzes can be taken using your mobile device (iPad, phone etc.) then that will suffice.

Quizzes. These will be given at the beginning of discussion sections and designated classes (see schedule). They will be based on the material in required reading. The quizzes are designed to make sure you do the reading, and are not meant to be representative of the exams. You should not assume that if you get 100% on each quiz that you will get 100% on the exam, as the quizzes are much simpler – on the other hand, if you flunk the quizzes you need to immediately seek assistance before the midterms.

Exams. There will be two midterm exams and one final exam. The exams will cover material from both lectures and readings, but with an emphasis on the lectures. EVERYONE IS REQUIRED TO TAKE THE FINAL EXAM. BE CAREFUL WHEN MAKING TRAVEL PLANS AS THERE WILL BE NO EARLY OR MAKE-UP FINAL EXAMS.

Grading
Your grade will be based on the point distribution below. I do not grade on a fixed curve.

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quizzes</td>
<td>10%</td>
</tr>
<tr>
<td>Participation</td>
<td>5% (iClicker)</td>
</tr>
<tr>
<td>Midterm 1</td>
<td>25%</td>
</tr>
<tr>
<td>Midterm 2</td>
<td>25%</td>
</tr>
<tr>
<td>Final exam</td>
<td>35%</td>
</tr>
</tbody>
</table>

Professional Conduct
You are expected to follow the student conduct code; academic dishonesty includes cheating, plagiarizing or knowingly supplying false information. If you are aware of academic dishonesty occurring, please see me.
