

SPATIAL COMPOSITION

ARCH 4/550

Fall 2020

4 Credits

Nico Larco

Stefan Gzyl

Tu/Th 10:15-11:45

+Discussion Section

SPACE AND THE COMPOSITION/DESIGN OF SPACE is a fundamental aspect of architecture and urban design. It is the medium we use to express ideas, shape projects, and relate to our context.

Developing fluency and fluidity in spatial composition is as critical to the architect and urban designer as developing fluency and fluidity in language is to a writer.

This course will include readings, presentations, projects and discussions on topics such as spatial perception, formal languages, ordering systems, urban space, and tectonics. Students will develop a deep understanding of form, formal analysis, and the use of drawing as a developmental tool in design.
