

Prof. Judith Sheine Mass Timber Design Fall 2023  
ARCH 4/584 CRN 10295/10340 MWF 1:00-4:50 PM

This studio will focus on the design of a project that employs a long-span mass timber structural system in an integrated design process in which design and structure are developed together:  
a Mass Timber Modular Housing Factory

The architectonic development of the projects will be aided by technical consultants, including a structural engineer and other mass timber experts, taking advantage of the resources of the TallWood Design Institute.
