

Test 1 Reflection

Part 1: Your Exam

1. I received a score of 72/100 on my exam. I feel as if I could have done better on the exam, I am not content with the score I received.
2. I had been preparing for the exam since we received our practice problems.
3. I did attend office hours, I did not attend MRC, and I did study groups with my classmates. I think I could have gone to office hours more, because when I went, I felt more confident in the content of the course. I went twice to office hours and studied in study group 3 times. I think it would have been helpful to go to MRC.
4. To prepare for the exam, I went over the class activities and my notes from class and the videos. I went over the homework problems and read the digital textbook. I also watched other YouTube videos on the content.
5. The smaller mistakes I made within the exam primarily were due to quick mistakes and not being as thorough as I should have been. Some of the larger mistakes were within topics I did not practice as much. Such as the derivative graph, that was a more recent topic we had learned, and I should have focused more on that while studying. For the next exam I will be sure to make an organized sheet of the topics I am least comfortable with, so I put more time into the content I am not as confident on.

Part 3: Your plan moving forward

1. To make sure I earn a 100% on the next exam I will attend the MRC hours and attend more office hours when I have questions about content or am not as confident as I should be on the content. I will be meeting with my classmates regularly for study groups and organizing my knowledge on the content of the next exam so that I feel confident on all of the material.
2. I do not have any comments on my score or the exam itself. Although I think that in the test review, more examples of graphing the derivative of f would have been helpful.

Part 4: Your instructor's role

1. Between now and the next exam, I expect my instructor to teach us new content and give us more material to allow us to be confident in our ability to solve problems quickly and efficiently.
2. I think that the class is great, although I would like us to have more time to have group practice problems.
3. I think my instructor is very helpful and doesn't need to do anything more to support me.
4. The other feedback that I have to offer is that I wish we had more time on the derivatives before the exam.
