

## SMART

**Specific:** Enhance my proficiency in full-stack development, particularly focusing on integrating frontend frameworks like React with backend technologies such as Node.js and Express.

**Measurable:** Monitor progress through completing online courses in React and Node.js, contributing to open-source projects on GitHub, and building at least two fully functional web applications by the end of this year.

**Achievable:** Allocate dedicated study time weekly to complete online courses and participate actively in coding bootcamps or workshops to deepen understanding and practical skills.

**Relevant:** This goal aligns with my career objective of becoming a proficient full-stack developer, complementing my current role as a backend developer and enhancing my overall skill set in web development.

**Time-bound:** Aim to achieve mastery in React and Node.js within the next six months, with quarterly assessments to evaluate progress and adjust learning strategies as needed.
