DO YOU
WANT A
CANDY?

Purpose

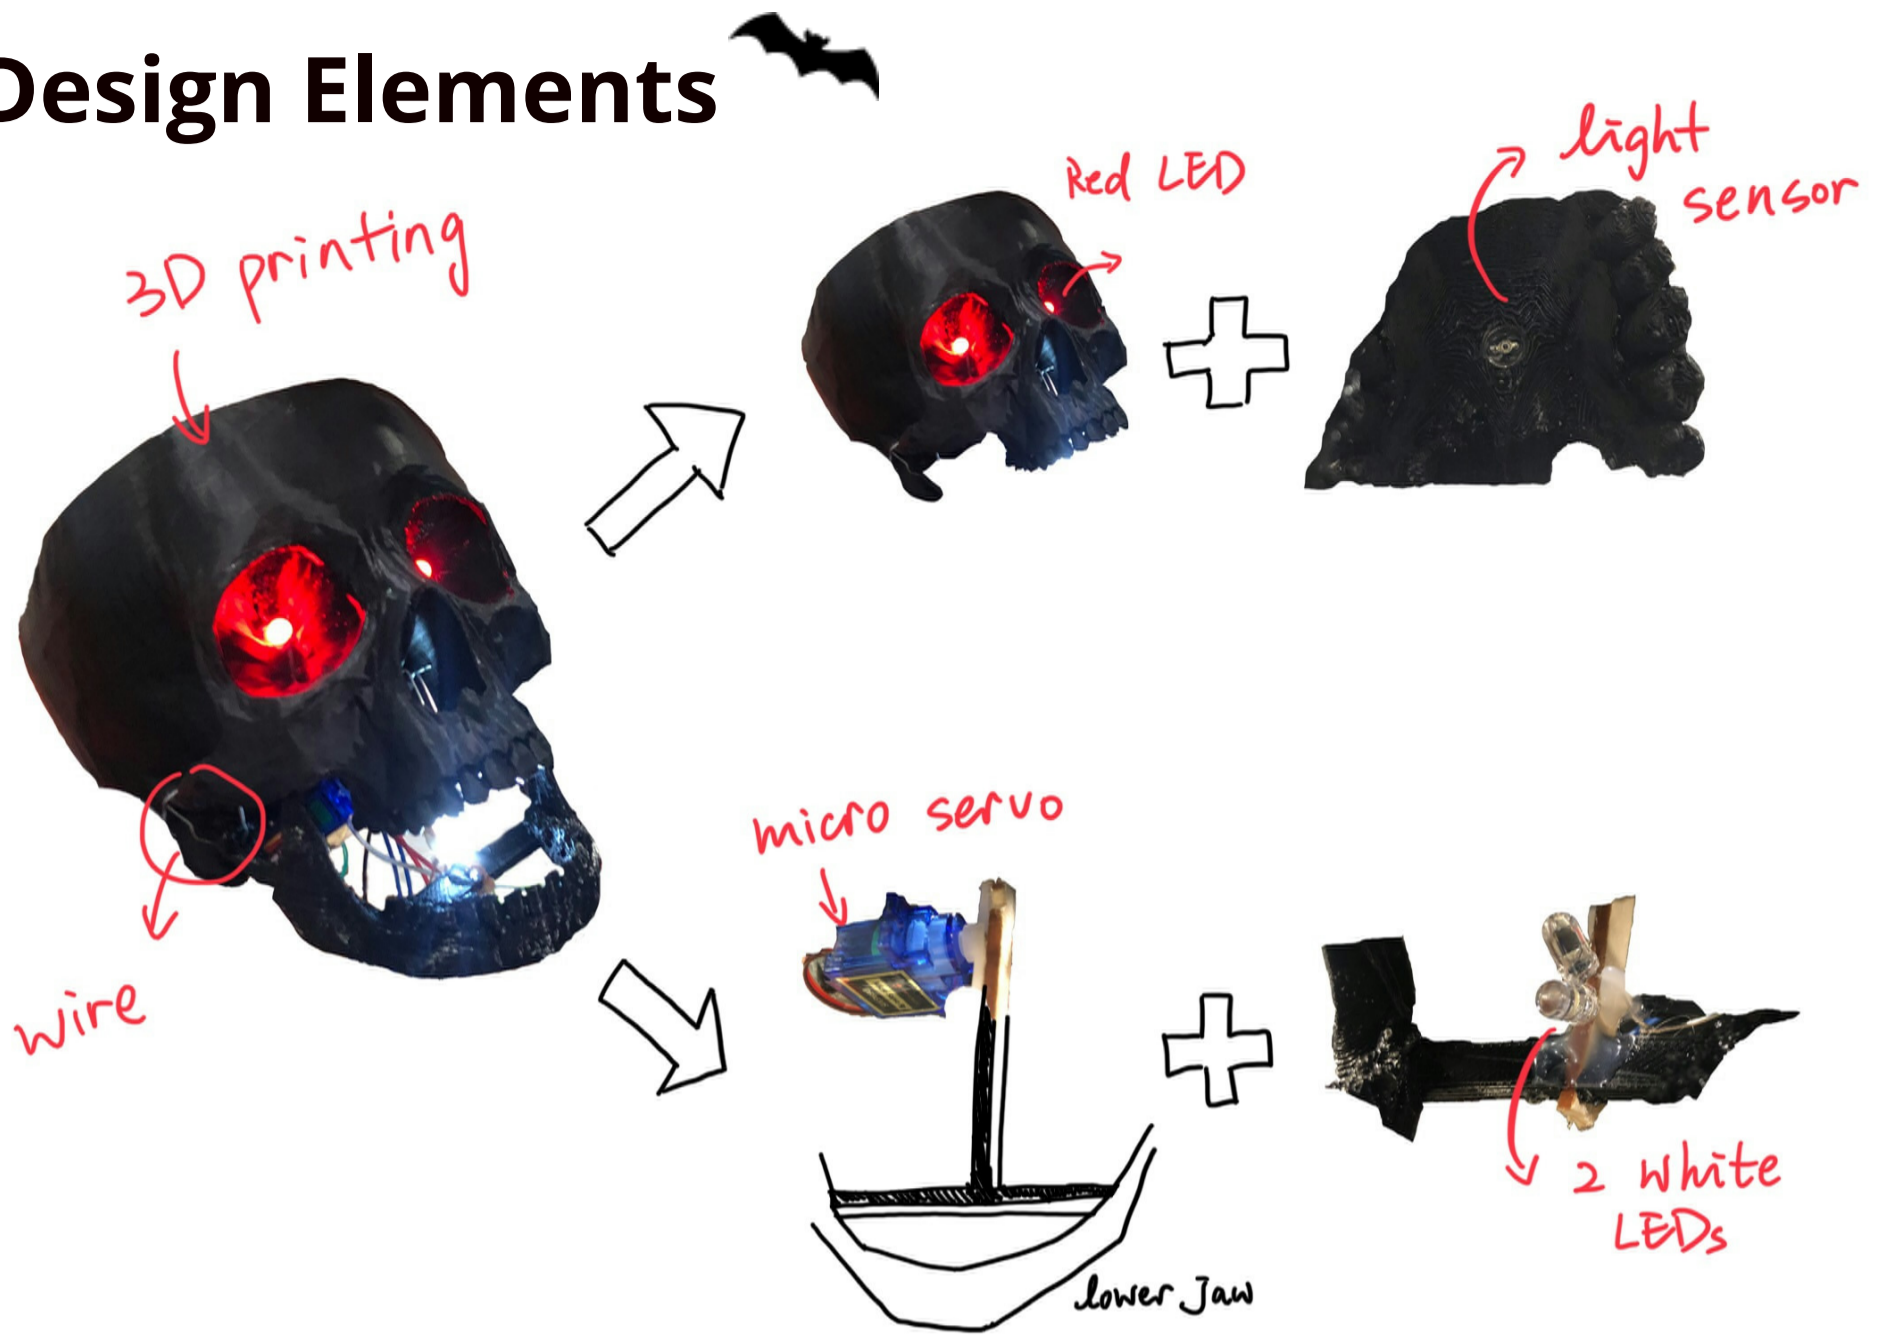

At first, we wanted to make a funny machine that can bite people's hand on Halloween Day. And in order to attract people, and let them reach into the skull's mouth, we decided to put a candy in the mouth. Also, candy itself is quite match the image of Halloween's atmosphere. But when we turned it into reality, we found it could also apply to our daily life, which would bring much fun for us.

Midterm Project of Interaction Lab

Design Elements

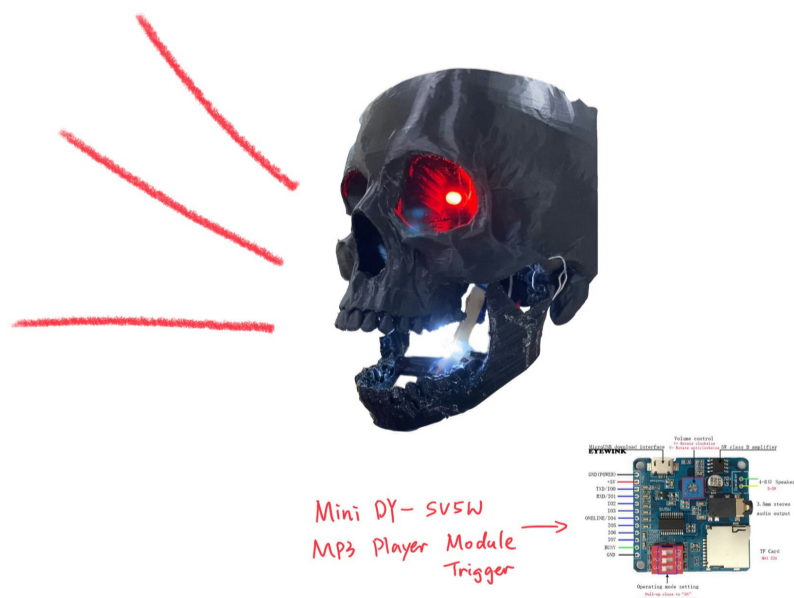

Interaction

Just like the name of the project, there is a candy in the mouth of the black skull. If the user want to get the candy, s/he has to reach into the skull's mouth. Then, the skull will randomly start to **chew/bite/do nothing to** her/his hand.

When user's hand is bitten, the eyes of the black skull will begin to **fade** quickly. Spontaneously, the sound of man's **growl** will utter from the mouth of the skull.
