UI | Projects home Page | UX

UI	UX
• projects page intro text is small	• feels empty
• projects intro title is a little small	
• carousel doest provide any content for the image or project it's related to	
• year buttons are small for their importance	

UI

Projects by Year

UX

- provide border around image/video content so it stands out
- Overall text is small
- User is unaware you are entering a new site when clicking "read more"

UI

Projects Displayed

UX

- "projects in display" → "projects on display"
- Maybe give context to where projects are displayed for those unfamiliar with ability projects
- "weekly update" → "project timeline"
- User is unaware you are entering a different site

- why are projects here displayed in gallery and not like the other projects
- when you click on project you are brought to a different preview page and then you have a whole separate page for full description
